

## ROTORBITAL SANDER

### RO 752 EK

#### ADVANTAGES

- 750W rotorbit sander with adjustable random orbit, specially designed for sanding and polishing with perfect finishes.
- Electronic speed variator to adjust the power to the desired material and finish.
- Adjustable orbit to suit the job. The larger the orbit the faster the work but the coarser the finish compared to smaller orbits which take longer but give perfect finishes:
  - Eccentric motion with high RPM rotation: for roughing, coarse sanding and edging.
  - Eccentric movement with low RPM rotation: for general polishing and sanding.
  - Eccentric movement without forced rotation (Rotorbital) for fine sanding and mouldings.
- The lateral handle together with the head ensures a stable, comfortable and consistent work flow.
- Integrated dust extraction to remove excess dust, the tool is suitable for connection to an external dust extraction system to maintain a clean working space.
- Soft start to avoid accidents and damage to the material to be sanded.

#### DATA SHEET

Power	750	W
Idle speed	1600-5800	min <sup>-1</sup>
Vibrations per minute	3200-11600	vpm
Forced rotation	180-700	min
Orbit	5	mm
Dish	Ø150	mm
Weight	2.4	Kg

#### INCLUDED

- 3 sandpapers
- Woollen beret.
- Foam plate
- Velcro clamping plate
- PE-HD case
- Lateral handle
